

NAAN MUDHALVAN ARTS INTERNSHIP PROGRAM 2026

Frontend Web Development using React Project Submission Template

STUDENT NAME: SJ. Kiruba

YEAR: 2nd

COLLEGE CODE: 303

COLLEGE NAME: Arcot sri mahaalakshimi women's college

DEPARTMENT: BCA

SEMESTER: 4th

ROLL NO: 30324U09040

NMID: 42a6401fa01d885b20e46073ff8d00ef@nm2026.in

DATE: 23-06-2026

TITLE: Job portal With Search and Filters

GITHUB LINK

<https://github.com/kiruba16212007/Kiruba1621.git>

1. ABSTRACT

The Job Portal with Search and Filters is a web application developed using React that helps job seekers find suitable jobs easily.

2. PROBLEM STATEMENT

Job seekers face difficulty finding suitable jobs quickly from large numbers of job listings.

3. OBJECTIVES

Provide an easy job search system.

Filter jobs based on user requirements.

Improve the job-finding experience

4. PROJECT SCOPE

The project includes job listings, search functionality, and filters for location and job type. Future enhancements can include login and job applications.

5. TECHNOLOGIES USED

React JS, JavaScript, HTML, CSS, VS Code, and GitHub were used to develop the project.

6. APPLICATION FLOW

Users open the application, search for jobs, apply filters, and view matching job listings.

7. KEY REACT CONCEPTS USED

React Components, Props, useState, useEffect, and Event Handling were used to build the application.

8. EXPECTED OUTPUT

The application displays relevant job listings based on the user's search and filter selections.

9. CHALLENGES FACED

Managing multiple filters and displaying accurate search results were the main challenges.

10. LEARNING OUTCOMES

This project improved knowledge of React, state management, component-based development, and user interface design.

11. CONCLUSION

The Job Portal successfully helps users find suitable jobs efficiently through search and filtering features. It provides a simple and effective job-searching platform.
